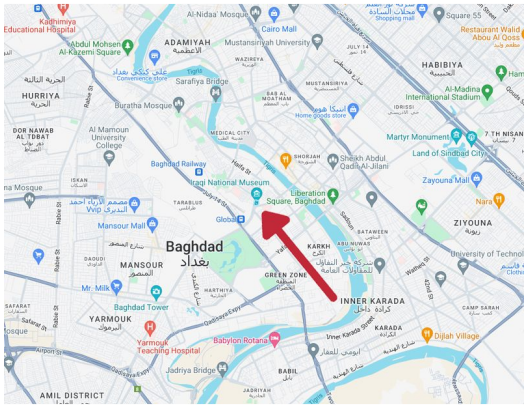
Iraq

Identifying Iraq

.IQ



The coverage in Iraq is limited to a single trekker in the **Iraqi National Museum** in Baghdad.

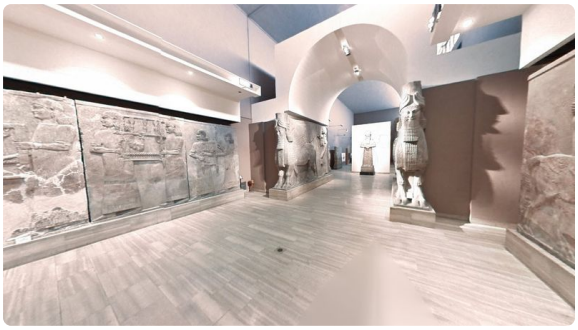
All of the coverage in Iraq is taken by a **trekker** with a camera similar to **Gen 2** but with distinctly worse image quality and colour. This coverage tends to be overexposed, even becoming blindingly so at some points.

NOTE: This camera quality is sometimes referred to as Gen 1.5.

The trekker blur has a well-defined, **pointed shape**.

The only piece of coverage outdoors is a small patio with a diagonal walkway. In this patio you can see many **date palms**.

This is the only piece of the coverage that can rarely appear on serious maps.



The inside of the museum features statues, steles, a variety of artefacts, and a few back rooms.
